- /2004/ Calculated using FFY 01 and FFY 02 incident Medicaid sealants applied to permanent molars of 8 and 9 year olds. This percentage is applied to approximated July 1, 2000 8 and 9 year-old population for 2001 and the July 1, 2001 8 and 9 year population for 2002. Denominators were obtained using 40% of 5-9 year-old Alaska Department of Labor population estimates. FY 1999 data was updated using revised information from Medicaid services.
- /2005/ Reporting years 2000-2002 have been modified. The new figures reflect the following changes: 1) We are now reporting state fiscal year rather than federal fiscal year. 2) The methodology that was used in previous years was revised using total number of 8-9 year olds receiving protective sealants on at least one permanent molar tooth in the Medicaid database during the state fiscal year, rather than the number receiving this service by mid-year.
- SFY 2003 is provisional. The 2003 population denominator was not available in time for the 2005 BG submission, so 2002 was used as an estimate. This figure will be updated for the 2006 BG.

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

Alaska PRAMS (II: Q7, III: Q5)Limitations: Only measures "intention" for pregnancies resulting in live births -- not those that were terminated.PRAMS measures data by calendar year

SIGNIFICANCE

In Alaska, 42% of births are unintended resulting in a personal and financial burden for Alaskan families as well as the welfare system. 55% of births to Medicaid families are unintended. Each unintended birth costs the welfare system approximately \$31,185 for the prenatal care and infant care during the first year of life. 61% of women who had an unintended pregnancy were not using any method of contraception at the time of conception. Increasing access to family planning services is a critical component in reducing unintended births.

DATA SOURCES AND DATA ISSUES

Alaska Division of Family and Youth Services

SIGNIFICANCE

The 1995 Edition of "Child Abuse and Neglect: A Look at the States," reported in 1993, Alaska led the nation in substantiated/indicated child maltreatment in physical abuse, neglect and sexual abuse. Child abuse and neglect have short and long term consequences lasting a lifetime. Efforts must be directed toward preventing child abuse and neglect and when it does occur, assuring early intervention and support services for the child.

SP # 3

PERFORMANCE MEASURE:

Percentage of Women Who Smoke Prenatally.

STATUS:

GOAL

To reduce the number of women who smoke prenatally.

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

Alaska PRAMS (II: Q29, III: Q23)Limitations: Only measures for pregnancies resulting in live births, only asks about cigarette use during the last three months of pregnancy.

SIGNIFICANCE

Maternal smoking during pregnancy is associated with increased infant morbidity and mortality especially as it relates to preterm and low birth weight infants. Maternal smoking during pregnancy may result in a lower birth weight, spontaneous abortion, or other serious complications of pregnancy. Mothers who smoke throughout pregnancy usually have infants that weigh between 150 to 300 grams less than non-smoking mothers. Based on Alaska smoking rates, research reported by the U.S. Surgeon General indicates that 5% of perinatal deaths, 20% of low birth-weight babies, and 8% of pre-term deliveries could be avoided annually in Alaska if maternal smoking were eliminated.

SP # 4

DATA SOURCES AND DATA ISSUES

Alaska PRAMS (II: Q32, III: Q26)Limitations: Only measures for pregnancies resulting in live births, only asks about alcohol use during the last three months of pregnancy.

SIGNIFICANCE

Prenatal exposure to alcohol is associated with a wide range of infant outcomes from Fetal Alcohol Syndrome (FAS) to very subtle effects. FAS could be among the most common preventable causes of mental retardation in the U.S.

SP # 5

PERFORMANCE MEASURE:

Percentage of Women Experiencing Physical Abuse by Husbands/Partners Surrounding Prenatal Period

STATUS:

Active

GOAL

To reduce the number of women who are physically abused by their husbands or partners surrounding the prenatal period.

DEFINITION

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

Alaska PRAMS (II: Q33g, III: Q32-3)Limitations: Population limited to women who were pregnant and had a live birth.

SIGNIFICANCE

Domestic violence in Alaska is most likely perpetrated by the woman's legal spouse (over 70%), common-law spouse, or live-in partner. Children of abused women are often also abused by the perpetrator. Physical abuse of some kind is estimated to affect over 19,000 women per year in Alaska. Physical abuse of women (around the time of pregnancy) by their partners has been linked to an increased likelihood of many adverse outcomes: fetal injury, infant and child abuse; increased isolation of the mother and a reduced number of prenatal care visits.

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

Provider Survey developed and administered by MCFH

SIGNIFICANCE

Domestic violence (DV) is the leading cause of injury and homicide for women and is associated with numerous chronic health effects. DV is the leading identifiable factor in child abuse. DV is a major barrier in prenatal care, the decision to breastfeed, teenage pregnancy, sexually transmitted diseases, and unplanned pregnancies. Early identification and intervention for DV can break the cycle of violence for women and their children. DV is a learned behavior. Children who grow up in violent households are more likely to become perpetrators and suffer from numerous physical and behavioral consequences.

DATA SOURCES AND DATA ISSUES

Alaska Vital Statistics is the reporting source for number of live birthsThe Birth Defects Registry will provide data on the number of children born with NTDsNeural Tube Defects are among the most common birth defects contributing to significant infant morbidity and mortality in the U.S. One half to two-thirds of NTDs may be prevented by the daily use of folic acid supplementation in women of reproductive age. It is estimated that the recurrence of NTDs may be up to 70% preventable by daily folic acid supplementation. Preventing NTDs through public health interventions can significantly reduce mortality and morbidity in Alaska's babies and children.

SIGNIFICANCE

Alaska is the most dangerous state in the country for children and teenagers. This is according to the latest report from the Johns Hopkins Center for Injury Research and Policy. From 1986-1992, the injury death rate for Alaskans from birth through age 19 was 45.7 per 100,000. Although improved over the previous six year rate of 55.6 deaths per 100,000, Alaska's injury death rate among children and youth still ranked first in the nation and was 50% greater than the national rate of 30.2 per 100,000 (Injury to Children and Teenagers, State-by-State Mortality Facts, S.P. Baker, et al).

FORM NOTES FOR FORM 17

Health Systems Capacity Indicator #1:

The methodology used included a review of STARS claims tables for Block Grant HSCI 1 - "the rate of children hospitalized for asthma". The data for this indicator comes from STARS claims table CH (Hospital Claims) and includes only "Inpatient Hospital" claims. The ICD-9 codes used for this query were consistent with the codes identified in the detail sheet for this indicator, 493.0-493.9.

493.0 - "extrinsic asthma"

493.1 - "intrinsic asthma"

493.2 - "chronic obstructive asthma"

493.9 - "asthma, unspecified"

For Health Systems Capacity Indicator #4:

Although Block Grant reviewers may expect to see 2002 data for most indicators on this year's Block Grant, 2001 data is the most recent available for the Pregnancy Risk Assessment Monitoring System (PRAMS) data source. PRAMS data is a routinely used source for the Block Grant even for other states, yet not all PRAMS states have their 2002 data back from the CDC. CDC has the responsibility for weighting the PRAMS data for each state. States are not put in the "queue" to be weighted until all batches for that birth year have been properly closed out and CDC has received the end-of-the-year birth file (in NCHS format) from the state in question. There is only one CDC person dedicated to weighting data and there are now 33 states and it takes one to two weeks to weight a dataset. There has been staff turnover at CDC and Alaska has been in the queue for several months. We expect to receive our 2002 data by October or November of this year at the latest.

HSCI #1 /2005/ The methodology to determine the rate of children hospitalized for asthma was revised for the 2005 BG application. Reporting periods SFY2000-2003 have been revised to reflect this change, note that 1998 and 1999 used a different methodology. Point in time estimates for denominator values were replaced with complete counts of children who were less than 5 years of age during the reporting period. Also, previously reported values appear to have included children through age 5, rather than up to age 5. The reporting period has been changed from calendar year to state fiscal year.

CY2002 data includes "children enrolled in WIC" only. Report does not include mothers served by WIC who are 19 years of age or younger. Report does not exclude the possibility of duplicated enrollments between regional clinics due to migration of clients; this error however is believed to be quite small. WIC grantees are not required to capture "race" data so accurate race distinctions are not possible. "Asian" and "Native Hawaiian or Other Pacific Islander" race categories are reported together under "Asian" as one race category. WIC records "Hispanic" as a racial category, not as an "ethnicity", Hispanics are therefore reported under the racial category "Other and Unknown" in HSI Table 09A and as an "ethnicity" under Table 09B.
